## Depro Group Automation & Engineering Specialists

### Covering Your Needs

In response to our customers' demands, the Depro Group have developed a range of unique covers that will fit over your robot, cylinders or Jigs/fixtures. The protective covers once fitted prolong the life of your robot and reduce costly downtime and maintenance.

Custom design service available measuring each Robot on site

All Manufactured in the UK

Installation support also provided

The covers are available to protect against the ingress of water, paint, shot-blast granules as well and High temperature applications in foundry/casting industry with materials rated beyond 1000°C.

The covers have been designed with the maintenance operator in mind, ensuring easy installation and removal.

## Productivity

The Depro Group engineering team will design and manufacture a specific robust, light weight, easy application protection covers for any demanding requirement that requires protection from many corrosive and non-corrosive elements.

We are ever evolving the material technology to achieve the highest standard in protection whilst maintaining flexibility of the application

## The Covers will:

Saves on costly consumables (cables, hoses, cylinder shafts and bearings etc)

Significant cost savings in service overhaul labor, downtime and cleaning costs

Enhances Mean Time Between Failure by up to 50%\* (MTBF)

Reduces exposure to manufacturing with lead time issues in ordering robot spares

Allows personnel to focus on other areas of maintenance

Necessary maintenance can be completed quicker

Additional protection for peripheral equipment mounted to the robot arm

Depro Group Offices:

Hampshire, UK
